We retrospectively analyzed the costs and outcome of patients undergoing aortic endarterectomy (AE) for end-stage ischemic foot or leg disease. A total of 38 consecutive patients (mean age 71 +/- 8 years, 86% men) underwent AE for severe peripheral arterial disease between 1990 and 2000. Forty-two operations were performed for limb salvage (52%) or palliation (48%) with primary (68%) or secondary (32%) out-patient procedures. The most common indications for surgery were severe pedal ischemia (n = 32) and gangrene of the leg (n = 26). Twelve procedures (29%) were performed for critical limb ischemia. Perioperative mortality was 3.2% (n = 1) and 30-day mortality was 2.6% (n = 1). Total direct hospital costs were \$55,500 +/- \$18,985. Indirect costs and hospital costs totaled an additional \$68,212 +/- \$42,412 for a total of \$124,712 +/- \$63,095. The total cost per AE was \$137,532 +/- \$45,798. Outcome-specific analysis of the 22 amputations revealed that the operation prevented amputation in 16 of 22 patients (72%) and failed to prevent it in 6 of 22 patients (27%). Postoperatively, 22 of 28 patients (79%) who underwent primary or secondary AE were able to wear a functional prosthesis. Cumulative patency of bypass grafts at 1, 2, and 3 years was 85%, 74%, and 68%, respectively. We conclude that AE for end-stage ischemic limb disease can be performed with a low morbidity and mortality, resulting in improved functional status and limb salvage. The operation also can prevent amputation in a significant number of patients.I've worked with and built products for about 40 years. I've built more than 100 products, a few of them successful. "What would the rest of the world do if on a given day all of a sudden, a category of citizens could no longer buy a handgun and ammunition?" "I don't know the answer to that, but what I do know is that since the 1960's, and to a lesser degree, the 1990's, we have seen a tremendous proliferation of guns and gun owners, with civilian use of handguns now well beyond what it was even two decades ago. We have also seen a huge increase in the number of people killed with guns, all over the world, and with handguns in particular. In fact, I would say that what I am seeing these days is very dangerous times for all of us. "A few years ago, the NRA claimed that there were over 300 million guns in the United States. I don't know exactly how many there are, but I believe that the number may now be above 400 million. But I don't know for sure. And I think that we all know that somewhere around one third of those guns are now in civilian hands, and that probably means that there are about one hundred million of them. "What would the rest of the world do if on a given day all of a sudden, a category of citizens could no longer buy a handgun and ammunition? I believe that the first response would be anger. The second response would be violence.

System Requirements:

While Quake is, admittedly, a very demanding game to play on a PC, its superiority over other titles is such that it's never actually been an issue. Still, it's worth knowing how you can get the best gaming experience out of your system. That's why we've put together this article to help you get the best possible performance out of your PC. We'll start by explaining what PC games really need and then go into a little more detail about each piece of hardware, including the most important and often neglected components of the system.
